United Waste Management Company

Turning Waste To Opportunity
About Us

United Waste Management Co. is a closed share holding company, established in the state of Kuwait in 2011.

We at United Waste Management are highly aware of the growing demand for efficient waste management and recycling in the MENA region. In Kuwait alone 3500 tons of municipal waste is produced daily. The collective disposal of this untapped resource in scarce landfill space leads to emission of greenhouses gases and environmental decay. Recognizing the sensitivities involved and commitment to the Go Green principal, our core existence centralizes on environment management techniques involving waste management, material segregation and effective re- utilization of wastes, such as waste water management, municipal solid wastes and re-cycling.

In order to achieve our targets, a focused concentration will be administered to design build and operate BOT and PPP projects. Furthermore an entrusted partnership with KEMA – a world leader in renewable energy provides sophisticated technology thus builds a promising future for environmental and social benefits and energy security.

UWMC is committed in complimenting the Kuwait Municipality in the strife towards a safe, clean country. UWMC has taken charge to meet the growing demand of a growing economy.
Mission

"To provide sustainable waste management solutions through consumer involvement."

To raise awareness of energy efficiency solutions, integrated with wind energy, geothermal and solar energy.

Vision

Efficient management of solid waste is a pressing and exponentially expanding global challenge.

In the GCC alone waste generation amounts to 120 million tons per year.

Our vital activity of offering solution of high quality, sustainable energy aims at alleviating municipal, industrial and medical wastes.

UWMC, along with its partners resolve to meet the growing demand of energy, through solar, wind and geothermal energies for generations to come.

UWMC, with its highly environmental sensitivities will implement solutions on a backbone of commitment to quality service and an investment in technological progress.

We continue to evaluate and research innovative techniques for landfill lining, soil restoration, hazardous waste collection and recycling facilities for domestic and industrial wastes.
Environmental Commitment

United Waste Management is committed to minimizing the environmental impact of all its operations and services. Our distinctive approach combines a commitment to quality of service and technological progress with real and apparent concern for the environment.

We continue to evaluate and research new and innovative techniques for landfill lining, soil restoration, hazardous waste collection, waste water and recycling facilities for domestic and industrial wastes.

Board of Directors

Mr. Saleh Al-Ghunaim (Chairman & CEO)
Mr. Wael Ahmad Al-Khaled (Vice Chairman)
Mr. Khalid Al-Homaizi (Board Member)
Mr. Hamad A. Al-Khalid (Board Member)
Mr. Dhary Barges Al Barges (Board Member)
CHALLENGES THAT UWMC FACE

Weak Waste Collection, Transportation And Handling Infrastructure:
Due to an insufficient means of local recycling facilities the recyclable recovery rate is low, which directs wastes to landfills. There is also a dire need of a more efficient sorting system -which would enhance overall waste processing.

Waste Recycling is Expensive:
Recycling facilities are often a victim of financial constraints. Government subsidies are often necessary to implement commercial viability of recycling projects.

Under Developed Market For Recycled Products:
A need for conscious awareness of the detrimental effects on the environment would whet the market for recycled goods. There are a few units engaged in recycling waste paper, paperboard and plastics. Much of the recycled products are then exported to developing nation markets, including the likes of India and Pakistan.
OPPORTUNITIES

In recent years, planning authorities have awarded a number of contracts to the private sector for setting up and operating Integrated Waste Management Facilities or waste recycling units. However, opportunities in the sector are still largely untapped.

### Waste Collection and Transportation Services

### Management Of Landfill Operations

### Waste Recycling

### Waste To Energy Opportunity

### Equipment Suppliers:

Increased focus on waste management represents a growing market for suppliers of compactor trucks, garbage bins, incinerators and other auxiliary equipment.

- Reuse
- Recycling & Composting
- Waste to Energy
- Treatment
- Land-fills
SERVICES - WASTE MANAGEMENT

UWMC is a representative of ENVAC in Kuwait, we on the verge of revolutionizing waste collection and handling procedures.

Waste Water Management

Municipal Solid Waste

---

SERVICES - RENEWABLE ENERGY

The most cost effective sources of energy come from energy efficiency and conservation.

UWMC has a strategic alliance with KEMA in taking a pragmatic approach to renewable energy and pursuing and focusing on technologies for harnessing renewable energy, these include geothermal energy, wind energy and solar energy.

SERVICES- PAPER RECYCLING

We Recycle Paper, Cardboard, Carton in Kuwait.

We are one of the largest private paper recycling carters in Kuwait.

We've been servicing Kuwait for many years and each year we have committed ourselves to making sure that our services are the best they can be. We are committed to finding waste solutions for a better environment!

We provide home pickups of recyclables such as paper, carton. When paper adds to your home clutter, it can be a fire hazard and dangerous to leave around in huge stacks. Here are the items that can be picked up:

- Newspapers
- Magazines
- Old Books, Old documents and Notebooks
- Carton Boxes
- Cardboard
- Shredded Paper & documents
- Flyers and Handouts

Paper Free Program

We are providing paper free program for institutes, schools, universities, corporate sector, departmental stores, hospitals, houses etc.
SERVICES- ELECTRONIC WASTE RECYCLING

We provide electronics recycling services to a wide range of clients including local, national and international businesses, other electronics recyclers, local governments managing residential collections and electronics manufacturers who are required to meet state and country legislative requirements.
